

ABSTRACT OF THE DISCLOSURE

5 A system and method for monitoring moving equipment
operations for determining operator efficiencies for moving
operations. The system and method for monitoring moving
equipment operations includes a position locating assembly coupled
to an moving equipment for determining a current position of the
10 moving equipment on an interval basis, a data storage means
operationally coupled to the position locating assembly for
recording the current position for each interval, and a data
processing means for processing and presenting the position
information for a user.
